● PROJECTS

10/01/2025

Final Python Project – AWS Configuration Automation Tool

- Built a CLI tool to generate JSON configs for S3, Lambda, and EC2 resources.
- Focused on secure defaults, IAM roles, and best practices.
- Implemented input validation and interactive menu logic.
- Wrote unit tests using pytest and mocked AWS calls with moto.
- Designed for clarity, modularity, and real-world automation scenarios.

Equivalent in content to EQF Level 6 (Bachelor-level), no formal degree awarded

01/03/2025 – 10/03/2025

Static Website Hosting Project

- Write here the description...Designed and deployed a static website using AWS services to ensure scalability, security, and high availability.
- **Technologies Used:** Route 53, S3, Certificate Manager, CloudFront.
- Configured an S3 bucket for static website hosting and DNS routing with Route 53 for a custom domain.
- Secured the website with HTTPS using AWS Certificate Manager.
- Deployed CloudFront to improve global content delivery and reduce latency.
- Delivered a secure and reliable solution with 99.99% availability and optimized user experience.
